

Paul Karpus

WEB3 Back-end Developer

SKILLS

Advanced:

JavaScript, TypeScript, Node.js, Nest.js

SQL, MySQL, Redis, MongoDB

Web3, Solidity, Ride, Motoko, Solana, Arweave, IPFS, ZKP, Cryptography

Proficient:

React.js, Angular.js, Vue.js

Amazon, GCP, Docker, CI/CD, RabbitMQ

C++, C#, Rust, Python, Bash

AI, ML

EXPERIENCE

Company 1 WEB3 Back-end developer

November 2020 - Present

NDA Web3 telegram bot wallet with ZKP AUTH on APTOS

Responsibilities: Development of back-end based on interaction with APTOS blockchain and telegram bot, REST API, Web3 & JWT Auth interaction with telegram, CI/CD

Stack:

Nest.js, Postgres, Aptos, Docker.

NDA Web3 platform for working with green energy certificates

Responsibilities: Development of back-end based on interaction with smart contracts, REST API, Web3 & JWT Auth interaction with frontend, CI/CD

Stack: Nest.js, Postgres, ethers.js, Redis, Docker.

NDA Web3 platform fetching prices for traders' service

Responsibilities: Development of back-end based on interaction with smart contracts, REST API, RabbitMQ, JWT Auth interaction with frontend, CI/CD

Stack: Nest.js, Postgres, ethers.js, Redis, RabbitMQ, Docker.

NDA Web3 platform sports betting in the NBA league

Responsibilities: Development of back-end based on interaction with smart contracts, REST API, RabbitMQ, JWT Auth interaction with frontend, CI/CD

Stack: Nest.js, Postgres, ethers.js, Redis, RabbitMQ, Docker, Arweave, Merkle tree.

NDA Web3 platform based on code Balancer DEX

Responsibilities: Work as a frontend developer, customizing the app with the requirements of the client.

Stack: React.js, web3.js, Metamask.

NDA Web3 platform based on code Uniswap DEX, web3 bridge (Ethereum, Avalanche, Polygon, Bnb, 15 chains in total)

Responsibilities: Work as a frontend developer, customizing the app with the requirements of the client.

Stack: React.js, web3.js, Metamask.

NDA Web3 bridge (Harmony - Edgware)

Responsibilities: Full stack development, React.js application, writing logic and fixing issues in smart contracts, deploying contracts to Substrate (based on Polkadot), interacting with Edgware team.

Stack: TypeScript, React.js, Solidity, Rust, Harmony, Edgware, Substrate.

NDA DEX

Responsibilities: Development of back-end built on LoopBack 4, based on interaction with smart contracts, REST API, JWT Auth interaction with frontend, e2e testing

Stack: LoopBack 4, Postgres, ethers.js, Docker.

Company 2, Middle full stack engineer
May 2020 – November 2020

NDA Monitoring platform for servers serving solar electric stations in the USA

Responsibilities: Worked as a frontend developer, developing the application to interact with New Relic service and whitelisted users.

Stack: React.js, New Relic, Nest.js, Mongo.db.

NDA Healthcare application

Responsibilities: Worked as a full-stack developer, developing the application to interact with smart contracts deployed on the Polygon chain..

Stack: Nest.js, Angular.js, Polygon, smart-contracts, MongoDB

Company 3, WEB3 full stack developer

February 2019 - May 2020

projects:

Based on the forked code Waves blockchain, developing smart contracts on Ride

Crowd Sales on Waves

Work with AI projects using the models Bart, Pavlov, GPT2

Responsibilities: Full stack development

Stack: Nest.js, Angular.js, Angular.js, Waves, Acryl, smart-contracts, MongoDB

Company 4, WEB3 full stack developer

January 2018 - February 2019

projects:

Arbitrage bot between cryptocurrency exchanges

Supply chain with real sensors based on Nem blockchain technologies, Arduino

Responsibilities: Full stack web3 development

Stack: Nest.js, Angular.js, Nem-sdk, Stellar-sdk, HyperLedger-sdk, MongoDB, C++, Arduino, IoT

Company 5, WEB3 full stack developer

January 2017 - January 2018

projects:

Web3 game with betting

Web3 Lottery

Crowd sells

Responsibilities: Develop smart contracts built with Solidity, write backend to interact with smart contracts and frontend

Stack:

Express.js, Angular.js, web3.js, Solidity, Truffle

Company 6, full stack developer

January 2016 - January 2017

project: Time tracker for screen shooting and counting work time

Responsibilities: Develop back end and frontend

Stack: Express.js, Angular.js, Electron.js, MongoDB

Company 6, back-end developer

April 2015 - January 2016

projects: back-end apps based on express.js for mobile apps and web applications

Stack: Express.js, MongoDB

HOBBIES

Play chess, hackathons participation

EDUCATION

September 2012 - June 2015

“Step” Academy”

Software engineering

LANGUAGES

Ukrainian - Native

Russian - Native

English - Intermediate (B2)
